*Requires 1" rings of different heights, either a Low and a Medium or a Medium and a High. 30mm rings may require shimmming.

**Requires a Low and a High 1" ring. 30mm rings likely require shimmming.

NOTE:

The last two characters of each stock number indicate grade (Gunnur, Limited, or Custum) and number of pieces. To order one of our special fluted bases (not listed above), substitute F2 at the end of the normal stock number. For stainless steel, add -SS after the stock number. Not all bases are available in stainless steel.

Ring-extending or short-ring-spacing bases are designed for certain scopes that may be too short for a standard Conetrol mount. The rear Conetrol ring typically sits just behind the shell ejection port, the front ring maybe an inch or so ahead of the port (between the two front screw holes for screw-attached bases). If your scope would not allow this, you should order a ring-extending or short-ring-spacing base.

Conetrol mounts are available for virtually any firearm made that will take a conventional top mount low over the receiver. If your gun is not listed among the popular models above, we might be able to identify a special combination of our two-piece bases that will work for you. Contact us with full particulars.
